PEGASOS CAR LIFT

CHARACTERISTICS

- The PEGASOS was developed specifically for the transport of cars and convinces with a sophisticated design and a variety of comfortable features. Lifting and lowering is realised by an energy-efficient electric drive.
- The car lift is a system of two opposing guide columns and a chain driven framework at which the cabin is fixed
- It is driven by two frequency controlled gear motors, which ensures a smooth acceleration and deceleration of the cabin

OPERATION MODES

AUTOMATED RIDE

Self-retaining push button
(from 3 stops)

FULLY AUTOMATED RIDE

Automated ride due to car
detection (2 stops)
